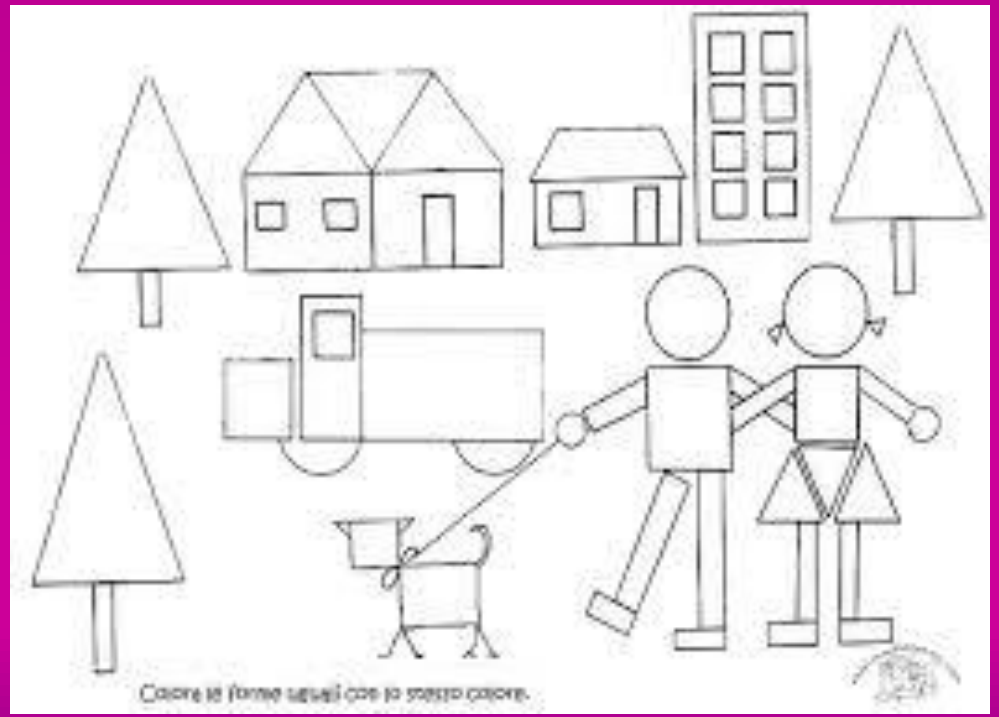
OGNI OGGETTO HA UNA FORMA

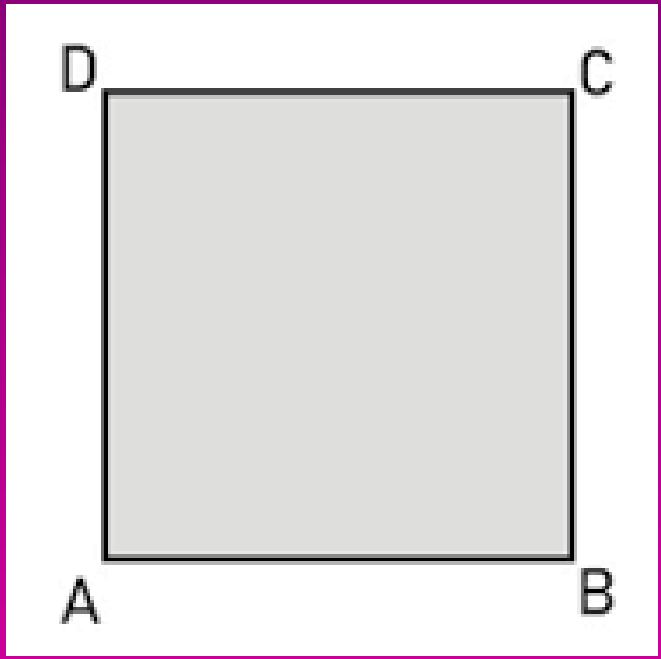
Le forme geometriche….
intorno a me



Paolo Camotti 1°A

In casa mia ho trovato le forme geometriche

Ho trovato il quadrato



- Definizione:
- In geometria, il quadrato è un quadrilatero regolare, cioè un poligono con quattro lati e quattro angoli congruenti. Il quadrato è un caso particolare di rombo e di rettangolo quindi è un caso particolare di parallelogramma

Ad esempio

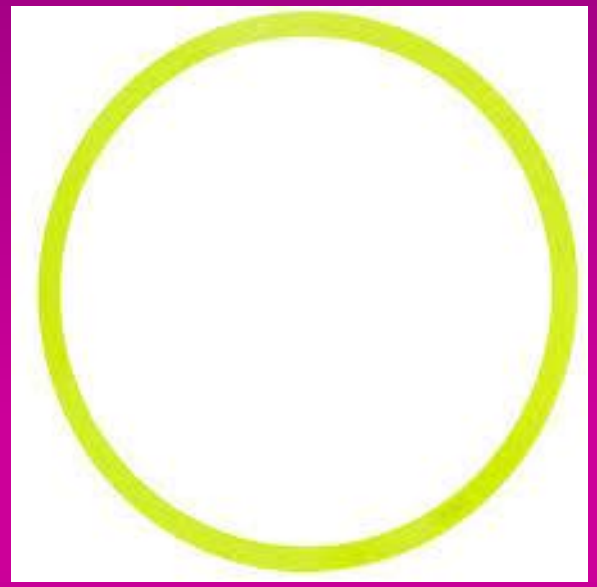
La libreria
in salotto

Ho trovato il rettangolo

In geometria, il rettangolo è un quadrilatero che ha i lati uguali a due a due

Ad esempio

Ho trovato il cerchio



In geometria il cerchio è la parte di piano delimitata da una circonferenza ed è costituito dall'insieme infinito dei punti che distano da un punto dato, detto centro

Ad esempio
